ADDIS ABABA SCIENCE AND TECHNOLOGY UNIVERSITY

AASTU — Mock Institutional Information Pack

Purpose: A sample PDF for testing document upload, extraction, chunking, embeddings, hybrid retrieval, citations, and grounded answers in a Retrieval-Augmented Generation (RAG) application.

Important notice: This is entirely synthetic demonstration content. It is not an official AASTU publication, policy, academic calendar, contact directory, or statement of current university services. Names, dates, fees, procedures, programs, room numbers, and contact details in this document are fictional and must not be relied on for real university decisions.

Document type: Mock student information handbook
Version: 1.0
Prepared: November 2026
Intended audience: RAG application developers and testers

1. Institutional Profile

Addis Ababa Science and Technology University (AASTU) is used in this mock dataset as the institutional subject. The following profile is written for information-retrieval testing and should be treated as fictional example content rather than an authoritative description of the real university.

1.1 Example mission and vision

Example mission: To provide science- and technology-focused education, encourage applied research, and support innovation that addresses practical societal and industrial challenges.

Example vision: To become a leading institution for technology-oriented learning, research collaboration, and entrepreneurship in the region.

1.2 Example strategic priorities

Priority	Description	Illustrative indicator
Teaching quality	Improve course design, laboratory instruction, and student feedback processes.	At least 80% of courses receive a do
Applied research	Encourage projects that address energy, manufacturing, computing, and urban challenges.	Each department documents at leas
Industry links	Build structured relationships with companies and public institutions.	A student internship coordination me
Digital services	Make common student services accessible through online systems.	Routine requests receive an initial re

1.3 Example academic units

For this mock handbook, the university is represented as having the following illustrative academic units:

Academic unit	Example areas of study
School of Computing	Computer Science, Software Engineering, Information Systems
School of Electrical Engineering	Power Systems, Electronics, Communications
School of Mechanical and Manufacturing Engineering	Manufacturing, Industrial Systems, Mechanical Design
School of Civil and Environmental Engineering	Construction, Water Resources, Environmental Systems
School of Applied Natural Sciences	Applied Mathematics, Physics, Chemistry

The academic-unit names and program examples above are included only to create realistic search material. They are not a verified list of AASTU's current schools or accredited programs.

2. Student Academic Services

2.1 Registration

In this fictional example, a newly admitted student completes registration by confirming admission information, presenting the required identification, selecting the assigned academic program, and checking the semester course list. The sample registration desk is called the Student Records Office.

Illustrative documents: admission letter, student identification document, two passport-size photographs, and any program-specific forms listed in the admission notice.

Mock processing target: routine registration corrections are reviewed within two working days after all required documents are submitted.

2.2 Add and drop

A student who needs to change a course submits an add/drop request during the first ten instructional days of the semester in this sample policy. The academic adviser checks prerequisites and timetable conflicts. The department coordinator then approves or rejects the request. Requests submitted after the deadline require a written explanation and approval from the academic registrar.

2.3 Academic advising

Each student is assigned an academic adviser. Advisers help students understand degree requirements, select appropriate courses, plan workload, and identify academic support. Students should prepare their current transcript and a draft course plan before an advising appointment.

2.4 Assessment and grading — mock scale

Letter	Score range	Illustrative grade point	General interpretation
A	90–100	4.00	Excellent
B	80–89	3.00	Very good
C	70–79	2.00	Satisfactory
D	60–69	1.00	Minimum pass in this example
F	Below 60	0.00	Fail

This grading scale is fictional and is provided only to test questions that require exact numerical retrieval. Do not treat it as AASTU's official grading policy.

2.5 Grade appeal

Under the sample procedure, a student who believes that an examination score was recorded incorrectly submits a grade-review form to the department within five working days after results are published. The instructor checks the marking record. If the issue remains unresolved, the department head reviews the case and provides a written response.

3. Campus Facilities and Student Support

3.1 Library

The mock AASTU Central Learning Library provides printed books, electronic learning resources, quiet study areas, group discussion rooms, and computer workstations. Students use their university identification number to borrow eligible books.

Service	Mock rule or limit
Standard book loan	14 calendar days
Renewal	One renewal if no other user has reserved the item
Reference materials	Library use only
Group study room	Reservation required; maximum 8 students
Late return	A fictional charge of 2 birr per item per day is used in this dataset

3.2 Computing laboratories

The example Computing Laboratory is open Monday to Friday, 8:00 a.m. to 6:00 p.m. Scheduled classes have priority over individual practice. Students must use their own assigned account, avoid installing unapproved software, and save coursework to an approved storage location.

3.3 Student counselling and wellbeing

The sample Student Support Office offers confidential appointments for academic stress, study planning, adjustment to university life, and referral to appropriate professional services. The fictional office hours are Monday, Wednesday, and Friday from 9:00 a.m. to 4:00 p.m. Students are encouraged to request an appointment rather than sharing private concerns at a public service desk.

3.4 Cafeteria

For this test document, the main cafeteria serves breakfast from 7:00 a.m. to 9:00 a.m., lunch from 12:00 p.m. to 2:00 p.m., and dinner from 6:00 p.m. to 8:00 p.m. The sample menu rotates weekly and includes vegetarian and non-vegetarian choices.

3.5 Accessibility

The mock campus access desk receives requests for classroom access support, accessible learning materials, and assistance navigating campus facilities. Requests should include the service needed and the relevant course or building, but students should avoid sending unnecessary medical details through general email.

4. Research, Innovation, and Student Projects

4.1 Example research themes

The following themes are fictional examples used to test retrieval across related technical topics:

Theme	Example project question	Potential output
Renewable energy	How can a small campus building reduce electricity use?	Energy-use analysis and prototype monitoring plan
Smart agriculture	Can low-cost sensors help monitor soil moisture?	Sensor prototype and field-test report
Software systems	How can a university improve access to student information?	Requirements document and working software prototype
Manufacturing	Can a redesigned component reduce material waste?	CAD model and comparative test results
Water management	How can water consumption be measured in a building?	Measurement plan and dashboard prototype

4.2 Student project proposal

A sample student project proposal contains: (1) project title, (2) problem statement, (3) objectives, (4) brief literature review, (5) proposed method, (6) materials or data required, (7) timeline, (8) expected results, and (9) references. The proposal is first discussed with a supervisor before submission to the department.

4.3 Example project: Campus Energy Monitor

Objective: Design a prototype that records electricity consumption at regular intervals and displays daily and weekly summaries.

Inputs: sensor readings, timestamp, building identifier, and meter identifier.

Processing: validate readings, store measurements, calculate daily totals, and flag unusual changes for review.

Expected output: a dashboard showing consumption trends. The prototype is a learning exercise and must not be connected to live electrical infrastructure without qualified supervision and formal authorization.

4.4 Internship preparation

The fictional Career and Industry Linkage Office recommends that students prepare a one-page CV, a short project portfolio, a transcript if requested, and a concise description of the skills they want to develop. Students should verify internship requirements directly with the organization offering the placement.

5. Example Administrative Procedures and Frequently Asked Questions

5.1 Requesting a transcript

In this mock procedure, a student completes a transcript request form, provides the student ID, indicates whether an electronic or printed copy is needed, and submits the request to the Student Records Office. The fictional processing target is three working days. Requests with missing student information may take longer.

5.2 Lost student ID

A student who loses an ID card reports the loss to the campus service desk, completes a replacement request, and presents another accepted form of identification. The sample replacement fee is 100 birr. This amount is invented for testing and is not a real university fee.

5.3 Frequently asked questions

Q: When does the mock add/drop period end?
A: It ends after the first ten instructional days of the semester in this sample policy.

Q: How long can a standard library book be borrowed?
A: The sample standard loan period is 14 calendar days.

Q: Can a reference book be taken out of the library?
A: No. In this mock policy, reference materials are for library use only.

Q: What is the sample late-return charge?
A: The fictional charge is 2 birr per item per day.

Q: How many students can use one group study room?
A: The sample maximum is eight students, and a reservation is required.

Q: How long does a transcript request take?
A: The mock processing target is three working days when the request is complete.

Q: What is the sample student ID replacement fee?
A: The fictional replacement fee is 100 birr.

Q: Who reviews an unresolved grade appeal?
A: The department head reviews the case after the instructor's initial check.

Q: What should an internship applicant prepare?
A: A one-page CV, a short project portfolio, a transcript if requested, and a concise skills statement.

5.4 Sample contact directory

Office	Mock email	Mock location
Student Records Office	records@example.edu	Administration Building, Room A-104
Library Help Desk	library@example.edu	Central Learning Library, Ground Floor
Computing Laboratory Support	lab-support@example.edu	Technology Block, Room T-203
Career and Industry Linkage Office	careers@example.edu	Student Services Building, Room S-112

All email addresses, room numbers, office names, service hours, deadlines, prices, and rules in this directory are fictional placeholders. The example.edu domain is intentionally non-operational.

6. RAG Testing Notes

This document intentionally contains repeated concepts across sections, exact values, named offices, procedural sequences, and question-answer pairs. It can be used to test:

- PDF text extraction and page-aware metadata
- Recursive chunking and overlap
- Vector retrieval versus BM25 keyword retrieval
- Hybrid ranking and reranking
- Questions requiring exact values, such as 14 days or 100 birr
- Multi-step procedural questions
- Citation accuracy and refusal when information is absent

Grounding rule: A RAG assistant using this file should answer only from the retrieved text, identify this file as a mock dataset, and avoid presenting its invented details as official AASTU information.
